The molecular weight disclosed to me and contemplated by the inventors at the time of the filing of the application is weight average molecular weight.

3. The equation for calculation of weight average molecular weight (Mw) that was broadly disclosed as "molecular weight" at the time of filing for the polyol is:

$$M_w = \frac{\sum_i N_i M_i^2}{\sum_i N_i M_i}$$

where N is the number of moles in the sample with mass M, and N*M is the mass of the sample.
